Back-plate is mounted to wall. Dispenser/reservoir unit locks into bottom portion of mounted plate.

With foil seal down, refill is aligned with middle and upper tracks on back-plate (Figure 1). Refill is pushed in and slid down into tracks locking it into position, puncturing the foil seal (Figure 2 and 3).

Product flows into reservoir emptying completely during use with no waste.

When empty, refill tank can be changed at maintenance personnel's convenience as a full 1000 ml of product remaining in the reservoir.

You get 1,440 applications from each 4000-ml tank.
