

// ONE BRAND // ONE SOURCE // ONE SYSTEM

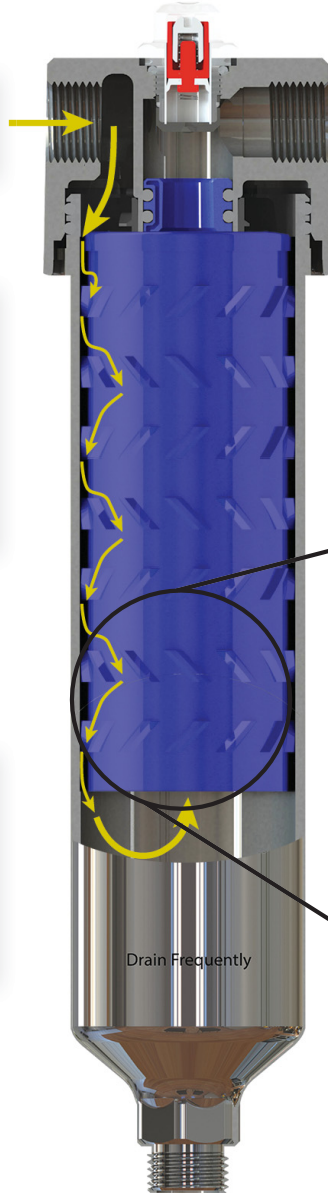

EXPEL 30 FILTER & AUTO DRAIN SET -

Point Of Use Liquid Water, Oil Emulsion Fluids and Solid Particulate Compressed Air Filter

AIR INLET / OUTLET 1/2" & 3/4" bspt / npt inlet / outlet connections.

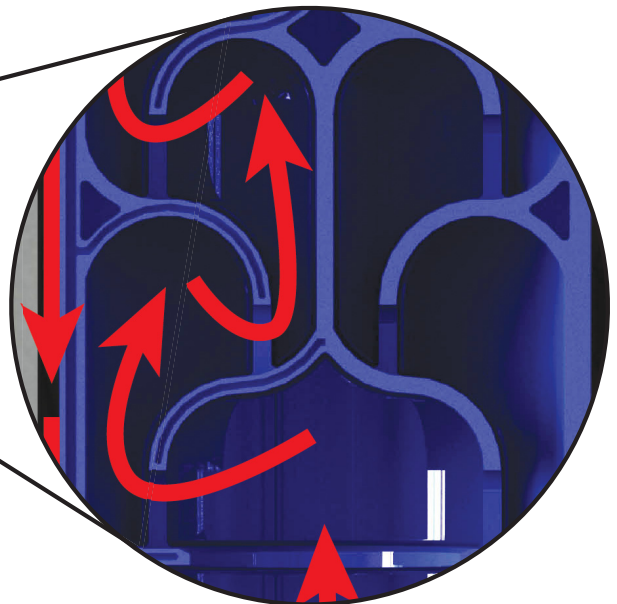

OUTER VANES create eddy currents as the air is forced to travel between the outer stainless steel shell and internal filter. Initiating the separation process, removing approximately 95% of all contaminants.

CLEANABLE, REUSABLE FILTER doesn't clog or become soggy preventing any pressure drop from occurring. Eliminates any continued life time ownership cost due to replacement parts.

99.9999% of liquid water, oil emulsion fluids and solid particulates down to 1 micron have been removed from the compressed air flow.

UMBRELLA CHAMBERS forces any remaining contaminants to fall due to gravitational force. The remaining 5% of separation occurs here

EXPEL 30 FILTER & AUTO DRAIN SET
Compressed Air Filter - Removes water,
oil emulsion fluids and solid particulates

AUTO DRAIN discharges liquids and particulates via drain tube that dump into a bucket, drain or other disposal method.
